Beschreibung

PHP AdminPanel (PHP AP) provides you access to the control features of your site as creating static or dynamical pages and allows your easily manage database tables with embedded PHP DataGrid. It includes Creating, Reading, Updating and Deleting (CRUD) records in database tables on your existing site. And also allows you manage menu options in AP "on fly".

For as little as few minutes you get professional looking and fully functional AdminPanel for your new or existing site. It dramatically reduce the development time of your web application.

The PHP AP is an excellent tool for:

- PHP database-driven web site
- Adding Back-End for existing site
- Creating online-based data administration
- Creating dynamic content management or your own CMS
