Beschreibung

Smart Statistics is a PHP script that offers semantical statistics and allows webmasters to monitor easily most visited pages of a site during a period.

This script is very different than regular statistics and logging scripts, both in purpose and in scale. Most statistics scripts and log analyzers offer huge amount of information, but you rarely can find some relevant information in what they provide you, so that you can use it in order to improve your site or in order to know what users are really interested in.
