### Produktbild

### Beschreibung

This MySQL class has the following features:

- Debug messages (can be activate or not);
- Error handling (can be activate or not);
- Basic MySQL functions.

The main idea of this class is to use only methods avoiding a direct access to the internal variables (means no public variables).

I hope the comments inside the code and the code itself are self-explanatory. As usual you are free to use/abuse/change this class.
