Staggered import of large and huge MySQL Dumps (like phpMyAdmin 2.x dumps and even GZip compressed dumps). Do you want to restore the very large backup of your mySQL database (or a part of it) into the new or the same mySQL database? You can't access the server shell and you can't import the dump using phpMyAdmin due to hard memory/runtime limit of the web-server. BigDump will do it even through the webservers with hard runtime limit and those in safe mode in a couple of short sessions.
