**Produktbild**

**Beschreibung**

This class allows you easy to send mails in:

textformat (with and without attachments)
htmlformat (with and without attachments)

it also create a textversion of a htmlmail and put it into a commentline
above the htmlmail so user who dont have htmlmails activated can read the
mail too.

Easy to use attachments:
$mail->attachment ("filename.ext");

Read end of script for more introductions.
