Beschreibung

Login Manager V3.0 is designed for web administrator to easily manage user accounts, create membership protected areas on the website, and provide capability to effortlessly limit user's access to secured areas. Login Manger V3.0(LM3.0) uses PHP and MySQL for lightning fast processing. LM3.0 comes with an admin control panel where administrator can create new user account, new secured access area, activate/deactivate user account, send mass email etc. LM3.0 is an authentication system which can integrate with any existing website that meets the requirements. LM3.0 provides a gatekeeper where user must be authorized before entering the membership secured areas. The software is very versatile and can be used so that either the administrator creates new member accounts or let users sign up and create their own account, in later case the software will validate user's email before activate new account for this user, see our demo for more features.
