Beschreibung

ApPHP AJAX File Uploader is an easy to use, high-performance PHP AJAX Multiple File Upload Control which allows you to upload files to web server without refreshing the page.

Most of the web application available today includes a capability of user to upload files, whether it is a social media application or a CMS/Blog network platform. Upload capability of your application can be made easier and usable to the user if you are using our File Uploader control.

This control allows you select and upload multiple files and/or cancel running file uploads, add new files during uploading. The client-side look and feel may be easy customized according to your needs.
