Beschreibung

PHP Advanced Transfer Manager lets your users to upload and download file from your server. It's highly configurable with user accounts support. Users can give description to files, create and delete their own files and directories and sort lists by filename, upload date or downloads. Currently supports English, Italian and Spanish, but you can customize the application in your language too. This update introduces the new 'webcopy' feature, user types fully customizable and fixes some security holes and some bugs.
