Beschreibung

Simple script to allow a site directory on your site. Quick to configure and easy to use and navigate through. Sections can be broken down into many sub-sections and the directory can be searched.

Directory is maintained through a admin section which allows creation of new sections either main or sub sections. From the admin section all entries can be searched through along with information on keyword searches and most visited site.

To add new sites a simple form is provided to collect all the information, which once submitted automatically notifies the submitter and the site admin. It is by deault set up so that all sites must be authorized before going live within the main site directory, this is done through the admin section. Once authorized another e-mail is sent to the person who submitted the site. Links can also be suspended or easily deleted.
