Description

Simple CMS PHP is a simple php script and it can be used for an easy content management system of the pages on your website. Installation is simple and administration is very user friendly. No need of programming skills.

Here are some of the features of Simple CMS PHP:

- one single step simple installation;
- very user friendly admin area;
- the system is used in already existing webpage and just control the content of that page;
 - familiar WYSIWYG(text) editor where you could format and style the text and pictures;
 - write the content for the pages into any language you need;
 - just paste very short code on the place of the page where you want to control the content;
 - developer licence, so you could read and modify the code of the script;
- we provide free installation help on your website;
