Description

AmpJuke is a program that runs on Linux using Apache, MySQL and PHP. AmpJuke streams MP3-files (that is: music) to one or more clients using the HTTP-protocol.

AmpJuke "selling point" focuses on flexible navigation as well as speed.

Any program that can handle M3U-playlists (ie. WinAmp or Microsoft Media Player) can play the streamed music. You either play music right away or build a "queue" of tracks to be played and/or merge albums, performers, tracks, favorites into the existing queue.

Features include, but are not limited to:

- * Scanning and import of music based on ID-tags stored within the MP3-files.
- * Lists with: Track, Album, Performer, Year and Favorites (lists can be sorted by f.ex. Performer, Year, Track Name, Album, Last Played etc.).
- * Search.
- * Random play (based on all tracks, range of years, favorite list or queued).
- * Simple administration.
- * Multiple languages.
- * Automatic retrieval of album/cover art.
