Description

There're a lot of comments in the market about "The web of services" from the simple ways of content syndication used today to the futuristic approach of UDDI. In its creation the web was a collection of documents, browseable information, as the web evolved it was good to add some services to the web, in the future the web will be the place where organizations provide services useful to the consumer and/or other organizations, this synergy between b2b and b2c models can be thought as a web of services.
