Description

getID3() is a PHP4 script that reads ID3v1 (up to 1.1) and ID3v2 (up to 4.0) MP3 tags and outputs the data to a multi-dimensional array. Also reads MPEG audio info from MP3 frame header, such as bitrate, channels, MPEG version, layer, VBR/CBR mode & method, etc. Parses all documented ID3v2 tags so your coding is easy. Supports variable-bitrate MP3s (both Xing and Fraunhofer methods).
