Description

With the "Backup My Webspaces" PHP Script you can backup your entire or only parts of your webspaces. You will have the option to setup unlimited backup profiles and can run it automatically through a cron job. Furthermore you can choose from 4 backup methods (zip, tar, tar.gz and tar.bz2) and can let the script automatically upload the backup file to an external ftp server after each backup. This backup tool is more flexible than the ordinary backup function in the hosting control panel. Thus it is safer and will save hosting space and resources.
