Description

DAS is the Dynamic content Administration System for the websites. It is designed for the content management of DB, i.e. to browse, add, edit and delete data. It is somewhat similar to phpMyAdmin, but is specialized to edit content of the websites and their sections such as news, forum, directories, etc. It features easy to use, but powerful interface and highly tunable. The software is supposed to have an international language support, but at the moment only English and Russian languages are supported.
